

Amazing Octopus

With no bones, three hearts, and nine brains, octopus are amazing creatures!

Eyes

Octopus are technically colorblind.

Siphon

Water is pulsed in and out of their body using a muscular siphon. Octopus breathe, excrete waste, mate, expel ink, and move using jet propulsion with their siphon.

Arms

Octopus have eight arms and can **regrow** an arm that is lost.

Chromatophores

Special color changing cells on their skin that help them camouflage.

Suction Cups

Octopus use their suction cups to grasp, hold, smell, and taste their surroundings.
